Quarterly Meeting June 3, 2016

Additional details for participation in the Capture the Flag exercise

Please be sure to install one of the following applications (or something else that is comparable) to your laptop/notebook computer prior to coming to the June 3rd ISSA event.

You can't go wrong with Kali (www.kali.org). However, since this is going to be entirely web application targets then we recommend the Web Security Dojo (<https://dojo.mavensecurity.com>), as it comes pre-load with targets for you to practice against before and after the event. It is highly recommend that you also use VirtualBox (<https://www.virtualbox.org/wiki/Downloads>) in order to run Dojo. Instructions for getting setup with the Dojo are included here: <http://files.meetup.com/16676252/Dojo-intro-and-setup.pdf>
